Distribution of RUG-III Classifications to RUG-IV

The following charts show the distribution of RUG-III classifications to RUG-IV classifications. The data is from October 1, 2010 through September 30, 2011. The data is based on OBRA assessments used by the Minnesota Case Mix System.

Each chart shows the individual 34 group RUG-III classifications and how residents in that classification would classify under RUG-IV, 48 group model.

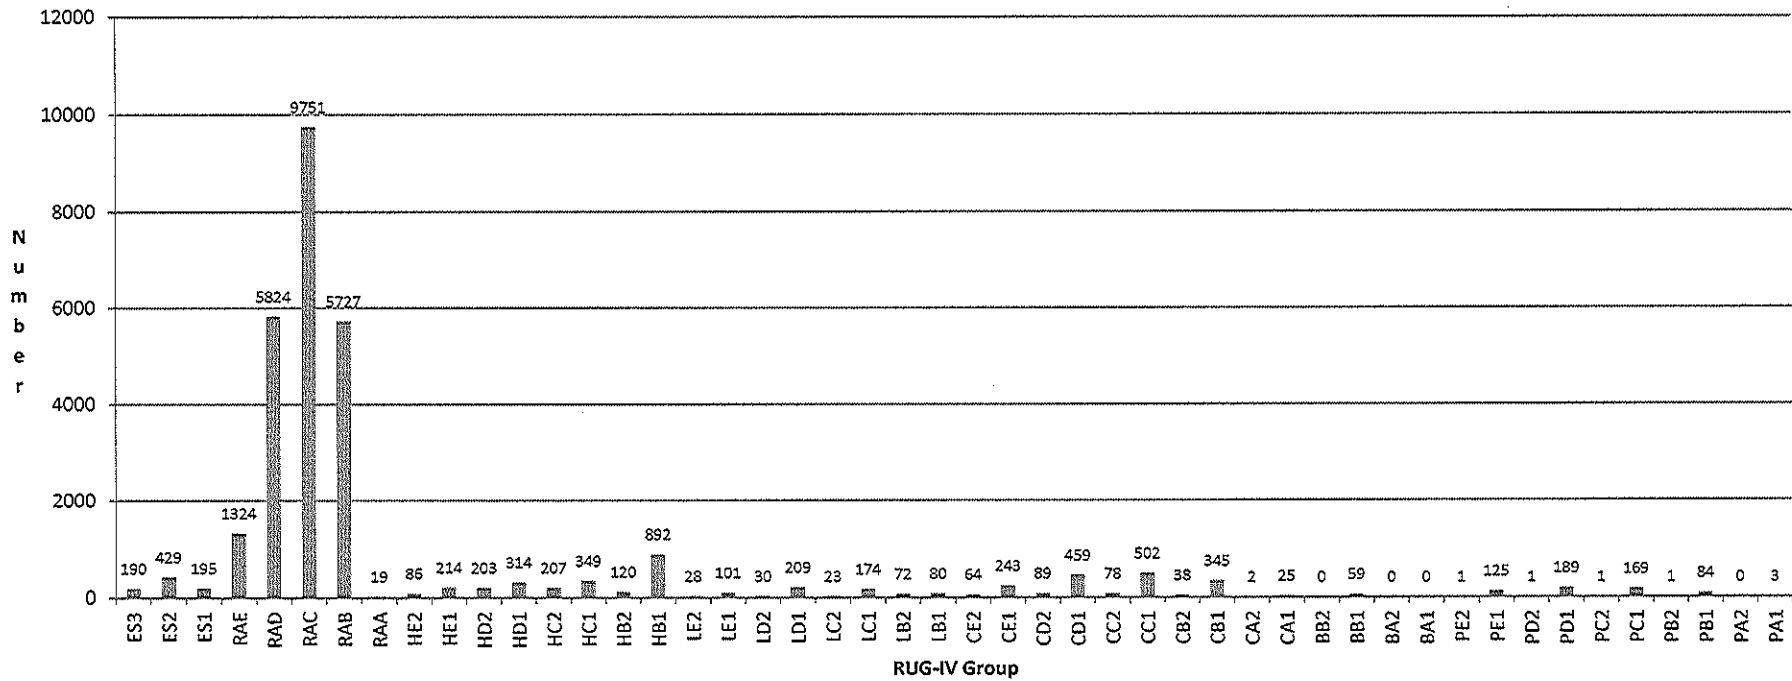

The pattern of distribution of RUG-III to RUG-IV will vary from facility to facility based on the resident mix and types of residents served. The charts provide the opportunity for a facility to compare itself to the statewide profile.
