See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

* Restorative Nursing Coding On the MDS

Presented by: Nadine Olness, RN
Marcil Martinson, RN
February 2012

* Participants will be able to:
  
  * State where the requirements for coding Restorative Nursing Programs can be found in the RAI Manual.
  
  * Write measurable goals for Restorative Nursing Programs.
  
  * Identify the minimum amount of daily time required in order to code the program on the MDS.

* Objectives

* Quality of Life
* Independence
* Prevent Decline

* Why We Do Them
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

* Care Planning
  * Promote ability to adapt
  * Focus on optimal functioning
  * These are NURSING programs

* Why We Do Them

* Admitted with restorative needs
* Needs arise during the nursing home stay
* In conjunction with PT, OT, or SLP
* Often when DC’d from formalized therapy

* When We Do Them

* 15 minutes over 24 hours
  * Each program is separate
  * Cannot combine minutes of two or more programs

* O0500 Guidelines
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

*Groups of 4 or less per caregiver
*How are you assuring/documenting this?

*M0500 Guidelines

*Measurable objectives/interventions
*Goal should be specific to that resident
*Goal should be specific to what you are trying to achieve with that program (the restorative function)

*M0500 Guidelines

*Resident A will be able to walk 100 feet in five minutes with assist of one and rolling walker.
*Resident B will feed self finger foods at 50% or more of meals.
*Resident A will be able to open the fingers of her left hand far enough to hold a spoon (or tennis ball or some other object)
*Resident C will button the buttons on her shirt with step-by-step cues.

*Examples of Goals
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

*Resident A will maintain current weight.
*Resident B will do 8 arm flexes two times a day.
*Resident C will maintain current strength and flexibility.
*Resident D will be clean, dry, and odor-free.

*NOT Acceptable Goals

*Periodic evaluation by RN

*00500 Guidelines

*Is this a reasonable evaluation?
1. Met goals...Continue program
2. The goal was that the resident would be able to walk 100 feet independently with her walker with cues and encouragement. She has demonstrated this ability every day for the past two weeks. Staff believe she has the potential to be able to walk even further, however, she is afraid and won’t attempt to walk further if staff aren’t with her. Will revise program to increase the number of feet she is walked. Will meet with her weekly to talk to her about her fears and talk to her about how much she is achieving.

*00500 Guidelines
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

- Caregivers must be trained in technique
- Techniques supervised by nurse

*00500 Guidelines

- Reviewers may interview aides and/or residents to determine if the programs are actually being implemented as written.
- Reviewers may observe the programs being provided to determine if the programs are being implemented as written.

- Caregivers must be trained

- If nurses are supervising these programs, they should be aware whether the programs are implemented as written or not.

*Must be supervised by a nurse
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

* Record Review
  * Number of days
  * Number of minutes
  * If a group, ratio of caregivers/residents

*00500 Gather the Information

*Remember!
*Nursing is responsible for supervising these programs. What is being done to assure the programs are being implemented as written?

*00500 Gather the Information

Restorative Nursing Programs – Pages O-31 through O-38

*The RAI User’s Manual
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

*A. Range of Motion (Passive)
*B. Range of Motion (Active)
*C. Splint or Brace Assistance

**OQ500 Program Categories**

*A Training and Skill Practice

*D. Bed Mobility
*To and from lying
*Turning side to side
*Positioning self

**OQ500 Program Categories**

*A Training and Skill Practice

*E. Transfer
*Moving between surfaces
*With or without assistive devices

**OQ500 Program Categories**
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

Training and Skill Practice

F. Walking
* Improve self-performance
* With or without assistive devices

* Q0500 Program Categories

Training and Skill Practice

G. Dressing and/or Grooming
* Dressing and undressing
* Washing and bathing
* Personal hygiene tasks

* Q0500 Program Categories

Training and Skill Practice

H. Eating and/or Swallowing
* Self-performance in feeding oneself
* Ability to ingest nutrition and hydration by mouth.

* Q0500 Program Categories
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

*Training and Skill Practice

*1. Amputation/Prosthesis Care

*00500 Program Categories

*Training and Skill Practice

*J. Communication

*00500 Program Categories

**00500 Coding Instructions**
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

* Mr. V lost ROM in right upper extremity
  * Right hand splint
  * Right hand ROM exercises
  * 15 minutes a day on splint
  * 15 minutes a day on ROM

* Is this enough information to know whether or not you can code this as Restorative Nursing on the MDS?

* Requirements
  * Measurable objective and interventions on the Care Plan
  * Evidence of periodic evaluations by nurse
  * NAs/aides trained in techniques
  * Nurse supervision of activities

* Mr. V lost ROM in right upper extremity
  * Right hand splint
  * Right hand ROM exercises
  * 15 minutes a day on splint - Time is documented 7 days/week
  * 15 minutes a day on ROM - Time is documented 7 days/week
  * The RN wrote a thorough evaluation of the program.
  * The goal, “Will open fingers far enough to insert baseball,” is in the record
  * The interventions are in the care plan and record
  * There is documentation the aides were trained on the techniques.
  * The RN has documented supervision of the program.
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

*Mrs. E cannot speak or nod her head

*SLP developed communication board
  * Taught resident and staff
  * Uses successfully

*No longer needs skill practice
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

* Resident independent in walking but experiences falls.
* PT works with resident and teaches her to do exercises. PT discharges resident - goals met.
* Resident receives reminders from staff to complete exercises - documented by NA’s B.I.D.
* RN evaluates the resident’s progress and recommends program be continued

*00500 Scenario #3

* Resident independent in walking but experiences falls due to poor balance.
* PT works with resident on balance exercises.
* Resident requires constant cueing to complete exercises.
* Nursing assistants are taught the exercises and how to cue the resident.
* Nursing Assistants document time spent cueing resident B.I.D. - 5 days/week.

*00500 Scenario #4
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

*Care Plan goals:
* Resident will continue to ambulate independently throughout the day.
* Resident will be free of falls related to poor balance when walking for the next three months.
* Care Plan includes the interventions
* RN evaluation addresses goals and reasons for continuing the program

**00500 Scenario #4**

**00500 Coding Scenario #4**

*Must meet the criteria in order to code on MDS

*Some programs are good for the resident and should continue but do NOT meet the criteria to code the program on the MDS.

**Scenarios 3 and 4**
See the “Long-Term Care Facility Resident Assessment Instrument User’s Manual” for complete instructions and guidelines.

*Needs of individual resident
*Measurable goals that reflect the function the resident is working on
*Criteria outlined in the RAI Manual must all be met
*Pages O-31 through O-38
