**Hepatitis: Type B**
*(caused by hepatitis B virus)*

### SIGNS AND SYMPTOMS
- Loss of appetite
- Abdominal discomfort
- Yellow eyes and skin
- Dark urine or light-color stool
- Nausea or vomiting
- Fatigue
- Pain in muscles and joints
- Begin 45-180 days after exposure

### TRANSMISSION
Hepatitis B is spread by:
- Vaginal sex
- Anal sex
- Oral sex
- Sharing needles for injecting drugs, body piercing or tattooing
- Infected mother to newborn
- Sharing personal items that may have blood or bodily fluids on them (razors, tooth brushes, nail clippers, pierced earrings)

### COMPLICATIONS
- Can spread to sex partners
- Can lead to chronic liver disease, cirrhosis, liver cancer and death
- Infected mother can pass virus to newborn.
- Infected baby may become a chronically infected.
- Can infect others while in both acute and chronic phases.
- Less than 1% of people die during the acute phase of infection.

### PREVENTION
- Hepatitis B vaccine is recommended for all infants, adolescents and sexually active adults.
- Don’t share needles for drugs, tattooing or piercing.
- Avoiding vaginal, oral or anal sex is the best way to prevent STDs.
- Latex condoms, when used consistently and correctly, can reduce the risk of transmission of hepatitis B.
- Always use latex condoms during vaginal and anal sex.
- Use a latex condom for oral sex on a penis.
- Use a latex barrier (dental dam or condom cut in half) for oral sex on a vagina or anus.
- Limit the number of sex partners.
- Don’t share personal items like razors.
- When infant is born to an infected mother, immunize infant at birth.

### TESTING AND TREATMENT
- Get a test from a medical provider if infection is suspected.
- Hepatitis B immune globulin injection given within 7 days after blood exposure or 14 days after sexual contact; vaccine may also be recommended.
