
HIV/AIDS Surveillance System

Sexually Transmitted Diseases, HIV and Tuberculosis Section, Epidemiology and Surveillance Unit
Introduction (I)

- These three introduction slides provide a general context for the data used to create this slide set. If you have questions about any of the slides please refer to the *Companion Text to the Minnesota HIV/AIDS Prevalence & Mortality Report, 2014* or *HIV/AIDS Prevalence & Mortality Technical Notes*.

- This slide set displays estimates of the number of persons living with HIV/AIDS (prevalence) and mortality in Minnesota by person, place, and time.

- The slides rely on data from HIV/AIDS cases diagnosed through 2015 and reported to the Minnesota Department of Health (MDH) HIV/AIDS Surveillance System.
Introduction (II)

- Data analyses exclude persons diagnosed in federal or private correctional facilities, but include state prisoners (number of state prisoners believed to be living with HIV/AIDS = 58).

- Data analyses for new infections exclude persons arriving to Minnesota through the HIV+ Refugee Resettlement Program (number of primary HIV+ refugees in this program living in MN as of December 31, 2015=167 ), as well as, other refugees/immigrants reporting a positive test prior to their arrival in Minnesota (n=175).

- Some limitations of surveillance data:
  - Data do not include HIV-infected persons who have not been tested for HIV
  - Data do not include persons whose positive test results have not been reported to the MDH
  - Data do not include HIV-infected persons who have only tested anonymously
  - Case numbers for the most recent years may be undercounted due to delays in reporting
  - Reporting of living cases that were not initially diagnosed in Minnesota is known to be incomplete

Data Source: Minnesota HIV/AIDS Surveillance System
Introduction (III)

- Persons are assumed to be alive unless the MDH has knowledge of their death.

- Persons whose most recently reported state of residence was Minnesota are assumed to be currently residing in Minnesota unless the MDH has knowledge of their relocation. Our ability to track changes of residence, including within the state, is limited.

- Vital status and current residence are updated through one or more of the following methods:
  - Standard case reporting
  - Correspondence with other health departments
  - Active surveillance (monthly)
  - Death certificate reviews (annually)
  - Birth certificate reviews (annually, women only)
National Context
Rates of Adults and Adolescents Living with Diagnosed HIV Infection, Year-end 2013—United States and 6 Dependent Areas

N = 950,811  Total Rate = 355.9

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. All displayed data have been statistically adjusted to account for reporting delays, but not for incomplete reporting.
Rates of Adults and Adolescents Living with Diagnosed HIV Infection Ever Classified as Stage 3 (AIDS), Year-end 2013—United States and 6 Dependent Areas

N = 527,170       Total Rate = 197.4

Note. All displayed data have been statistically adjusted to account for reporting delays, but not for incomplete reporting.
Stage 3 (AIDS) Classifications and Deaths of Persons with HIV Infection Ever Classified as Stage 3 (AIDS), among Adults and Adolescents, 1985–2013—United States and 6 Dependent Areas

Note. All displayed data have been statistically adjusted to account for reporting delays, but not for incomplete reporting. Deaths of persons with HIV infection, stage 3 (AIDS) may be due to any cause.
**HIV/AIDS in Minnesota**

New HIV Disease Diagnoses, HIV (non-AIDS) and AIDS Cases by Year, 2005-2015

- **HIV Disease Diagnoses***
- **HIV (non-AIDS)**
- **AIDS^**
- **AIDS at first diagnosis**

*Includes all new cases of HIV infection (both HIV (non-AIDS) and AIDS at first diagnosis) diagnosed within a given calendar year.

^Includes all new cases of AIDS diagnosed within a given calendar year, including AIDS at first diagnosis. This includes refugees in the HIV+ Resettlement Program, as well as, other refugee/immigrants diagnosed with AIDS subsequent to their arrival in the United States.
Persons Living with HIV/AIDS in Minnesota
Estimated Number of Persons Living with HIV/AIDS in Minnesota

- As of December 31, 2015, 8,215* persons are assumed alive and living in Minnesota with HIV/AIDS
  - 4,349 living with HIV infection (non-AIDS)
  - 3,866 living with AIDS

- This number includes 1,877 persons who were first reported with HIV or AIDS elsewhere and subsequently moved to Minnesota

- This number excludes 1,274 persons who were first reported with HIV or AIDS in Minnesota and subsequently moved out of the state

* This number includes persons who reported Minnesota as their current state of residence, regardless of residence at time of diagnosis. Includes state prisoners and refugees arriving through the HIV+ Refugee Resettlement Program, as well as HIV+ refugee/immigrants arriving through other programs.

Populations of Interest
HIV and Hepatitis B, C co-infection
HIV and Hepatitis B and C

- As of December 31, 2015*, 8,215 persons are assumed alive and living in Minnesota with HIV/AIDS

  - Of these 8,215 persons, 932 (11%) are co-infected with either Hepatitis B or C
    - Of the 932, 340 (36%) are living with HIV and Hep B
    - Of the 932, 592 (64%) are living with HIV and Hep C

* This number includes persons who reported Minnesota as their current state of residence, regardless of residence at time of diagnosis. Includes state prisoners and refugees arriving through the HIV+ Refugee Resettlement Program, as well as, HIV+ refugee/immigrants arriving through other programs.
