Trichomoniasis
(caused by *Trichomonas vaginalis*, a parasite)

**SIGNS AND SYMPTOMS**

For women:
- Some women have no symptoms
- Usually begin 5-28 days after exposure
- Itching, burning or pain in vagina
- Frothy, yellow-green discharge with foul odor

For men:
- Most men have no symptoms
- Mild discharge from penis
- Pain after urination or ejaculation

**PREVENTION**

- Avoiding vaginal, oral or anal sex is the best way to prevent STDs.
- Latex condoms, when used consistently and correctly, can reduce the risk of transmission of trichomoniasis.
- Always use latex condoms during vaginal sex.
- Use a latex barrier (dental dam or condom cut in half) for oral sex on a vagina or anus.
- Limit the number of sex partners.
- Notify sex partners immediately if infected.
- Infected sex partners should be treated to prevent re-infection.

**TRANSMISSION**

Trichomoniasis can be spread:
- Between men and women through penis-to-vagina intercourse
- Between women through vulva-to-vulva intercourse

**COMPLICATIONS**

If trichomoniasis is left untreated:
- Infections can be spread to sex partners
- Uncomfortable symptoms will continue
- In pregnant women, can cause premature delivery and low birth weight
- It can make it easier to transmit or acquire HIV during sex

**TESTING AND TREATMENT**

- Get a test from a medical provider if infection is suspected.
- Trichomoniasis can be cured using medication prescribed by medical provider.
- Partners should be treated at same time.

NOTE: A person can be re-infected after treatment.
