Criteria for Clinics Authorized to Provide Yellow Fever Vaccine in Minnesota

To be authorized to provide yellow fever vaccination as part of an international travel health clinic by the Minnesota Department of Health (MDH), a clinic must agree to:

1. Provide comprehensive personal travel consultation and risk assessment to patients before and after international travel, including:
   a. Having knowledgeable staff with training and experience in the field(s) of Travel Medicine, Tropical Medicine, and/or Infectious Diseases.
   b. Providing geographically defined information regarding precautions and considerations when traveling such as the prevention and management of injuries and foodborne, waterborne, vectorborne, and sexually transmitted diseases.
   c. Responding to special concerns or issues of patients with diverse medical conditions, such as those who may be pregnant or immunocompromised, and those traveling with infants and children.
   d. Accessible hours for patients to use the facility, e.g., including Saturdays and/or evenings.
   e. The availability of an infectious disease practitioner to provide consultation, either as part of the facility’s staff or as an identified adjunct to it.
   f. Knowledge of and ability to recognize signs and symptoms of common diseases in returning travelers.

2. Ensure that the clinic obtains one official yellow fever vaccination stamp using the Minnesota license number of a provider currently practicing at the facility. This number will be on file at MDH and Centers for Disease Control and Prevention (CDC). If the provider, whose license number is on the stamp leaves the clinic, ensure that a new stamp is obtained and the old one is mailed to MDH. If a stamp is lost or stolen, report it to MDH immediately.

3. Only administer yellow fever vaccine at the address indicated in the certification letter, and never redistribute the vaccine to other sites.

4. Provide travel vaccinations to include hepatitis A, hepatitis B, polio, measles, mumps, rubella, tetanus, diphtheria, pertussis, pneumococcal, meningococcal meningitis, rabies, rotavirus, human papillomavirus, varicella, zoster, Japanese encephalitis, typhoid and yellow fever. The facility must also provide prophylaxis for malaria.

5. Have appropriate vaccine storage units for vaccine. Combination refrigerator/freezers with one exterior door (dormitory-style refrigerator/freezers) are not acceptable.
6. Ensure appropriate storage and handling procedures are in place for all vaccines by following best practices standards as described in the CDC Vaccine Storage and Handling Recommendations and Guidelines (www.cdc.gov/vaccines/recs/storage/default.htm) and the CDC Vaccine Storage and Handling Toolkit (www.cdc.gov/vaccines/hcp/admin/storage/toolkit/index.html). Review procedures annually.

7. Ensure that a physician will be immediately available to handle any severe adverse reactions, which are more common though still rare with travel vaccines.

8. Ensure that a protocol is in place regarding anaphylaxis treatment, that staff receive training, and that the protocol and training are reviewed annually. In addition, the clinic must demonstrate appropriate and adequate knowledge of basic life support and CPR.

9. Demonstrate knowledge and understanding of the procedure for reporting vaccine adverse reactions to the federal Vaccine Adverse Event Reporting System (VAERS).

10. Have an agreement with a laboratory to test and diagnose parasite infections.

11. All clinical staff, including physicians, physician’s assistants, nurse practitioners, registered nurses, licensed practical nurses, medical assistants, etc., who are prescribing or administering yellow fever vaccine must:
   a. Complete the CDC Yellow Fever Vaccine Course (www.cdc.gov/travel-training/). A Continuing Education Certificate for each staff member should be in the clinic’s records prior to receiving authorization to provide yellow fever vaccination as part of an international travel health clinic.
   b. Providers are also encouraged to complete CDC’s Malaria 101 for the Health Care Provider (www.cdc.gov/parasites/cme/malaria/index.html).

12. Demonstrate adequate resources for acquiring up-to-date information on travel recommendations, restrictions, and requirements, e.g., CDC’s “Yellow Book” and Travel Health website (www.cdc.gov/travel/default.aspx); travel warnings of the U.S. State Department; the World Health Organization’s International Travel and Health Vaccinations Requirements and Health Advice; and TRAVAX (www.shoreland.com/).

13. Participate in periodic workshops and conferences directly related to travel medicine.

14. Complete the Yellow Fever Reauthorization Form for the clinic every other year to continue to be a Minnesota Authorized Yellow Fever Clinic.

If interested in becoming a Minnesota Authorized Yellow Fever Clinic, call 651-201-5522.
