

Prioritization of General Principles for Authorizing, and Authenticating Individuals, Setting Access Controls, and Auditing in a Health Information Exchange

Please review the 19 Principles and select which of the principles are most critical to further refine and develop in order to aid organizations in the formation and implementation of health information exchanges.

After reviewing the Interim Solution Report, we will poll Subgroup members individually regarding their top four priority rankings on the 19 Principles for further refinement and development. We will assign four points to your first priority, three points to your second priority, two points to your third priority, and one point to your fourth priority. We will then add the points assigned to the Principles by each Subgroup member. Using the total points assigned to each Principle, we will then create an overall ranking of the 19 Principles. This overall ranking will be used to assist and focus future activities in developing and refining the Principles.

Principles	Your Ranking	Group Ranking		
	Select Your Top Four Principles for Development (4,3,2,1) 4 = Highest Priority	Group Selection	Total Points	Overall Ranking
