Ortho-Phosphate, Total Phosphate

SAMPLE COLLECTION PROCEDURE

Reference Method SM 4500P E, EPA 365.1

Read instructions carefully.
Follow all instructions to avoid sample rejection.

- **Sample bottle:**
  - 250-mL plastic General bottle, Unpreserved

- **Shipping/sample hold time:**
  - Ship immediately. The sample must arrive at the laboratory within 48 hours of collection.

- **Sample location:**
  - State-approved or State-accepted location. If one of your locations is not in use, contact your compliance officer for direction.

- **Prior to collection:**
  - At least 48 hours before sampling, remove ice packs from the sampling kit and freeze them.

**Sample collection procedure:**

1. Attach the pre-printed label to the bottle. If you do not have a pre-printed label, write the following information, using a ballpoint or permanent pen, on the generic bottle label: PWSID, PWS Name, and Location ID.

2. Remove any attachments from the sample tap.

3. Turn on the cold water tap and run for 4 to 5 minutes, or until the water temperature has stabilized, whichever is longer.
   a. If there is only one faucet handle, make sure it is in the cold water position.

4. Reduce the flow of the water so the stream is steady and the width of a pencil.

5. Remove bottle cap and hold in hand. Do not touch the underside of the cap or the inside of the bottle.

6. Fill bottle to the shoulder. **DO NOT** overfill the container.

7. Screw the cap back on the bottle. Make sure the cap is on securely. Turn the bottle upside down to make sure the water does not leak.

8. **Note:** water quality parameter testing requires a field pH. Write the pH value on the Chain-of-Custody for each sample. See the pH (Field) sample collection procedure document for instructions.
9. Replace any attachments that were removed from the faucet or sample tap.
10. Repeat for other bottles and other locations.
11. Upon completion of sampling, immediately (within 15 minutes) place sample in cooler with
frozen cooling material.

Complete the Chain-of-Custody form using a ballpoint or permanent pen:

1. Name of the sample collector.
2. Date and Time collected (include a.m. or p.m.).
3. Field Number (if applicable).
4. Write down the pH at each location.
5. Put your signature on the “Relinquished By” line, including date and time. The date and
time are when the sample is put in the return mailer and sealed. If samples pass hands prior
to packaging, both parties must sign, date, and time. The first party would put down the
date and time of the transfer, and the second party would put down the date and time the
sample is packaged.

Deliver samples to the laboratory:

1. All sample containers must have cooling material present without evidence of sample
freezing.
2. Sample temperature requirements depend on when the lab receives the sample:
   a. Received 0 - 24 hours after collection: frozen or partially frozen (i.e. containing some
      solids) cooling material must be present. The temperature of the cooling material must
      be less than the temperature of the sample(s).
   b. Received more than 24 hours after collection: frozen or partially frozen cooling
      material must be present. The temperature of the samples must be between 0.0 and
      6.0° C.
3. Dropping off samples in person:
   a. Frozen or partially frozen cooling material must be present. Laboratory staff must
      confirm the state of the cooling material. The temperature of the cooling material
      must be less than the temperature of the sample(s). Temperature requirements listed
      above must be followed.
   b. Physically hand cooler/container containing samples and cooling material to
      laboratory sample receiving staff. Do not leave sample containers at the sample dock
      unattended.
4. Shipping samples:
   a. Make sure the completed Chain-of-Custody is in the shipping container.
b. Add enough fresh, frozen cooling material to the mailing container to maintain appropriate sample temperature as indicated above, with no evidence of freezing.

c. Ship to the Public Health Laboratory using the applicable address. Because of the temperature requirement, it is recommended to ship using guaranteed overnight shipping.
