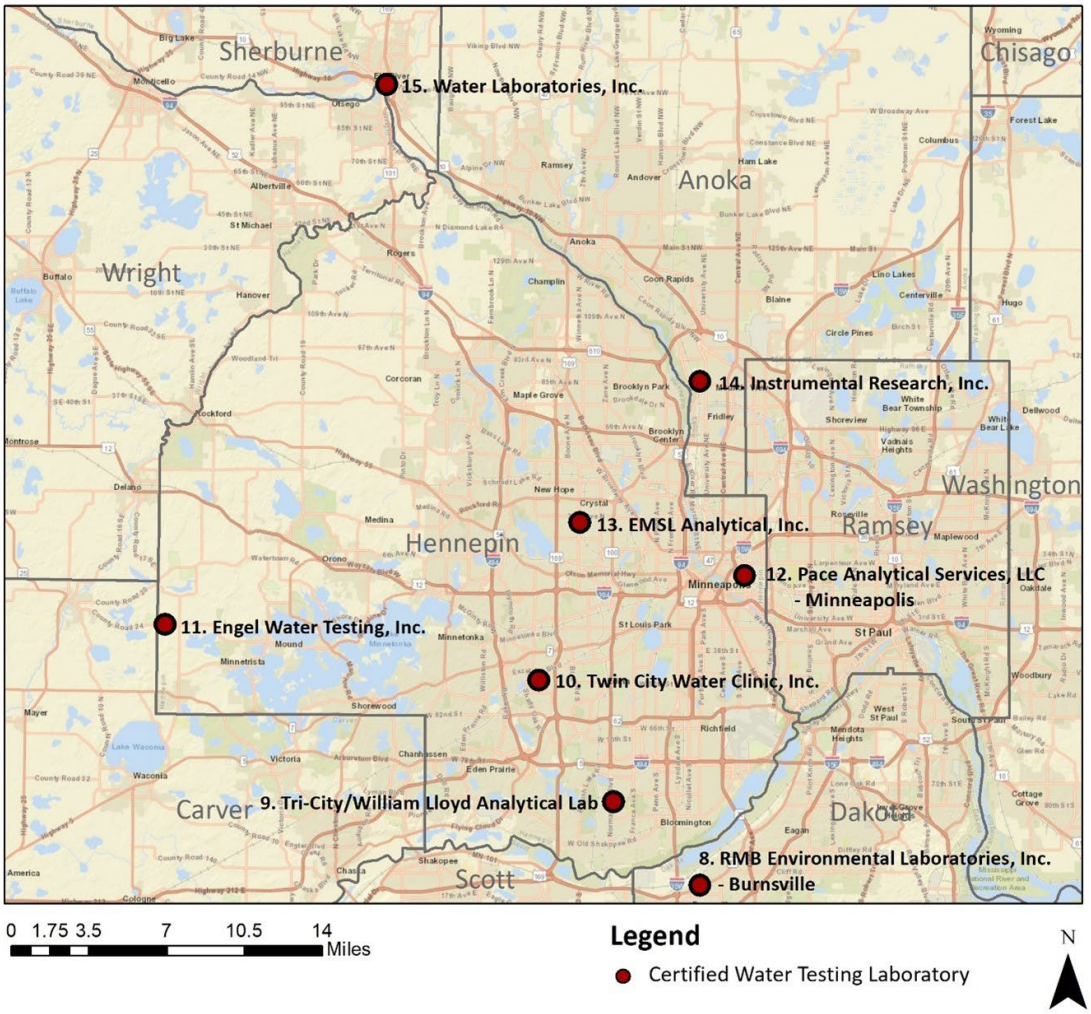
Accredited Labs in Minnesota Metro Area Accepting Drinking Water Samples from Private Well Users



Testing for Additional Contaminants (Analytes)

The table on the next page lists the labs that sample for coliform bacteria, nitrate, arsenic, manganese, and/or lead. If you want to test for a different contaminant (analyte), contact a certified water testing lab to see if they test for that analyte. Here is how you can find a lab:

1. Go to Search for Accredited Laboratories (www.health.state.mn.us/labsearch)
2. Select the **Customized Searches** tab; for "Program" select **Safe Drinking Water Program**; then select the analyte to be tested.
3. At the bottom of the page check the box that says **Accepts samples from private homeowners** and click on **Search**.
4. The resulting list are labs that are certified to test for that analyte.
