## Optimal Diabetes Care Measure Specifications 2022 Measurement Year

Numerator	The number of patients in the denominator whose diabetes was optimally managed during the measurement period as defined by achieving ALL of the following:	
	• The most recent HbA1c in the measurement period has a value less than 8.0 mg/dL	
	• The most recent blood pressure in the measurement period has a systolic value of less than 140 mmHg AND a diastolic value of less than 90 mmHg	
	• On a statin medication, unless allowed contraindications or exceptions are present	
	• Patient is not a current tobacco user	
	• Patient with ischemic vascular disease ( <i>Ischemic Vascular Disease</i> Value Set) is on daily aspirin or anti-platelets, unless allowed contraindications or exceptions are present	
Allowable Exclusions	The following exclusions are optional and may be applied to the eligible population:	
(Optional)	• Patient was a permanent nursing home resident at any time prior to the end of the measurement period*	
	• Patient was in hospice or receiving palliative care ( <i>Palliative Care</i> Value Set) at any time prior to the end of the measurement period	
	• Patient died prior to the end of the measurement period	
	<ul> <li>Patient was pregnant (<i>Diabetes with Pregnancy</i> Value Set) at any time during measurement period</li> </ul>	
	• Patient had only urgent care visits <b>during</b> the measurement period	
Measure Scoring	Rate/Proportion	
Interpretation of Score	Higher score indicates better quality	
Measure Type	Intermediate Outcome, All-or-none Patient Level Composite	

**\*NOTE**: Beginning in the 2023 MY, this exclusion will be discontinued.
