Topic	Description
Measure	Time to Intravenous Thrombolytic Therapy
Description	Indicator used to assess the percentage of adult ischemic stroke patients for which intravenous thrombolytic therapy was administered within 60 minutes following their arrival to the hospital.
Methodology	Population identification is accomplished either prospectively via concurrent case identification through daily review of emergency department logs or via a query of the hospital discharge information to find cases for inclusion. Data elements are either extracted from an EHR system or abstracted through medical record review.
Rationale	Appropriate, rapid administration of thrombolytic therapy within 4.5 hours of symptom onset has shown to improve outcomes for ischemic stroke patients. Tracking the time to IV thrombolytics administration can lead to streamlining of keycare processes for acute ischemic stroke patients. IV thrombolytics should be administered within 60 minutes of arrival.
Measurement Period	Data will be submitted on a quarterly basis on the following schedule for the 12 month measurement period: <ul style="list-style-type: none"> • Discharge dates: Third Quarter, 2022: July 1 – September 30 <ul style="list-style-type: none"> ○ Data submission deadline: February 15, 2023 • Discharge dates: Fourth Quarter, 2022: October 1 – December 31 <ul style="list-style-type: none"> ○ Data submission deadline: May 15, 2023 • Discharge dates: First Quarter, 2023: January 1 – March 31 <ul style="list-style-type: none"> ○ Data submission deadline: August 15, 2023 • Discharge dates: Second Quarter, 2023: April 1 – June 30 <ul style="list-style-type: none"> ○ Data submission deadline: November 15, 2023
Denominator	<ul style="list-style-type: none"> • Patients with documented final clinical diagnosis of ischemic stroke, or whose ED visit was assigned a principal ICD-10-CM diagnosis code listed in Table 1 for ischemic stroke. <p style="text-align: center;">AND</p> <ul style="list-style-type: none"> • Patients who received IV thrombolytics at the hospital.

Exclusions	<ul style="list-style-type: none"> • Patients <18 years of age on date of arrival to hospital. • Patients admitted solely for elective carotid endarterectomy or any revascularization. • Patients enrolled in a clinical trial related directly to stroke care. • Patients who started experiencing stroke symptoms after hospital arrival (in ED/Observation/Inpatient). • Patients who were determined to receive comfort measures only while still in the emergency department. • Patients who expire while in the emergency department • Patients whose date or time of arrival are missing or not documented. • Patients whose last known well time is missing. • Patients whose date or time of IV thrombolytics administration are missing or not documented. • Patients that receive IV thrombolytics greater than 4.5 hours after time last known to be well. • Patients with a documented eligibility or medical reason for delay in treatment (if IV thrombolytics is initiated greater than 60 minutes after arrival).
Numerator	All ischemic stroke patients who receive IV thrombolytics at the reporting hospital within 60 minutes or less from time of arrival.
Suggested Data Sources	ED records, intake/face sheet/hospital admissions records, progress notes, acute physician notes, diagnostic reports, radiology notes.
