* 5th grade survey did not ask this question.

^ New question in 2013.

** Body Mass Index (BMI) is a number calculated from a child's self-reported weight and height. BMI is calculated using a standard formula. BMI-for-age percentiles are used to interpret BMI numbers for children and teens. CDC BMI-for-age growth charts were used to determine weight status according to BMI for participants in the Minnesota Student Survey.

Not overweight: Less than the 85th percentile
Overweight: 85th to less than the 95th percentile
Obese: Equal to or greater than the 95th percentile

2013 Minnesota Student Survey

* 5th grade survey did not ask this question.

^ Responses for 30-day (found on Table 36) and 12-month misuse of prescription drugs are inconsistent for some students. This may be due to the misinterpretation of a skip instruction on the survey or to slight differences in how the questions were worded. Due to these methodological issues, the results for these questions cannot be compared to the results from previous years.

2013 Minnesota Student Survey
