

Animal Blastomycosis in Minnesota by Year, 1999-2021 (n=2173)

In 2016, direct reporting from laboratories was initiated. In 2020 and 2021, response to the COVID-19 pandemic affected surveillance. Reports of positive lab tests were received for 57 cases in 2020 and 75 cases in 2021 but no clinical information could be obtained; therefore they do not meet the case definition.
