

WHAT IS COVERED?

Women 40 and older should get a mammogram yearly. Ask if you are eligible for Sage when you schedule your annual exam.

Sage covers screening and diagnostic services related to breast and cervical cancer for women ages 40 to 64.

Your health care provider may suggest other tests or services, such as a cholesterol check, urinalysis, STD tests, removal of moles/warts or cervical polyps, pelvic ultrasounds, or more. You may refuse services offered that are not covered by Sage. You will be billed for services that ARE NOT listed under "Sage Covers."

Sage Covers:

- A screening office visit every year where a clinical breast exam and pelvic exam are offered.
- A mammogram every year.
- A Pap test every 3 years OR a Pap test every 5 years with HPV.
(Please call us if your doctor recommends more frequent Pap tests)
- Follow-up office visits and/or diagnostic tests whenever there is an abnormal breast or cervical screening result.

Sage services are completely free to eligible women.

Sage does not cover treatment, but uninsured Sage patients may be eligible to receive coverage for treatment services through Medical Assistance for Breast or Cervical Cancer (MA-BC). If you are diagnosed with breast or cervical cancer and do not have health insurance, please contact us and ask about financial assistance.

If you have ANY health insurance, we must bill your insurance first. If your insurance does not pay in full, Sage will cover eligible services not paid by insurance. If you believe you received a bill in error, please call us at 1-888-643-2584.
