

# Long-term Care COVID-19 Booster Vaccination Plan

9/30/2021

---

## Purpose

This document outlines the proposed implementation plan for the distribution and administration of COVID-19 boosters throughout the Minnesota long-term care (LTC) population, specifically staff and residents in skilled nursing (SNF) and assisted living facilities (ALF). On Sept. 24, 2021, the Centers for Disease Control and Prevention (CDC) made the following recommendations for people who received the Pfizer-BioNTech COVID-19 vaccine as their primary series:

The following groups **should** get a booster dose of Pfizer COVID-19 vaccine at least six months after the second dose:

- People 65 years and older.
- Residents in long-term care settings.
- People ages 50 to 64 with certain underlying medical conditions (refer to [CDC: People with Certain Medical Conditions \(www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html\)](https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html)).

The following groups **may** get a booster dose of Pfizer's COVID-19 vaccine at least six months after the second dose, if the personal benefits for them outweigh the personal risks:

- People ages 18 to 49 who are at high risk for severe COVID-19 due to certain underlying medical conditions (refer to CDC: People with Certain Medical Conditions above).
- People ages 18 to 64 who are at increased risk for COVID-19 exposure and transmission because of where they live or work.

This plan should be used by SNF and ALF to implement distribution and administration of COVID-19 boosters for individuals that fall into these eligibility categories. **People who received the Moderna or Johnson & Johnson (Janssen) COVID-19 vaccines as their primary series are not currently eligible for booster doses.**

---

## Definitions

**Booster:** A dose of vaccine given when the initial sufficient immune response to a primary vaccine series is likely to have waned over time. This document specifically outlines planning efforts for providing booster doses to long-term care staff and residents. Currently, only people who received the Pfizer COVID-19 vaccine as their primary series, and who meet the eligibility criteria outlined above, are eligible to receive a booster dose.

**Third dose:** An additional dose of vaccine given when the immune response to a primary vaccine series is likely to be insufficient. A third dose of mRNA vaccine for immunocompromised individuals who received an initial mRNA vaccine series was authorized by FDA and recommended by ACIP on August 12 and 13, 2021, respectively. If a long-term care resident is currently eligible for a third dose of vaccine, they should communicate directly with their primary health care provider for vaccine administration.

---

## Assumptions

### Regarding vaccine

- This plan is specific to COVID-19 vaccines currently authorized or approved and recommended for booster doses.
- There is a recommended minimum interval between series completion and administering the booster dose that should be followed. There is no maximum interval by when a booster dose must be administered, meaning staff or residents remain eligible to receive a booster dose after the minimum interval is met.
- Current and specific guidance for use of each COVID-19 vaccine, including booster doses, is available at [COVID-19 Vaccine Providers \(www.health.state.mn.us/diseases/coronavirus/vaccine/provider.html\)](https://www.health.state.mn.us/diseases/coronavirus/vaccine/provider.html).
- Operational needs may influence booster timing to some extent but will need to be balanced with the goal of ensuring that boosters are offered in a timely way to eligible staff and residents. *For example, if your vaccinator is able to provide on-site vaccination only one time, you may choose to schedule your booster vaccination clinic on a date when a larger portion of the population is eligible.*

### Partners

- For residents and staff who are willing and able to travel, COVID-19 vaccine can be accessed at an existing vaccine site (e.g., a nearby pharmacy or health care provider's office). This may be the fastest way to get vaccinated. Visit [vaccines.gov](https://www.vaccines.gov) or [Find Vaccine Locations \(mn.gov/covid19/vaccine/find-vaccine/locations/index.jsp\)](https://mn.gov/covid19/vaccine/find-vaccine/locations/index.jsp) to find the nearest pharmacy.
- Wherever possible, existing local relationships should be leveraged when planning booster dose events. Leveraging local vaccinator relationships include, but are not limited to: consulting for planning purposes; consulting for potential back-up vaccination services; scheduling for both COVID-19 and other vaccine needs; scheduling for COVID-19 and other medical/clinical needs, etc.

**Long-term care providers:**

- Should explore which local or regional vaccine provider is best suited to assist in the facility's vaccination efforts. A list of pharmacies that may be able to assist your facility is available as **Attachment 2** of this document.
  - If a local vaccinator cannot be identified or confirmed, the long-term care provider should work with MDH to get assistance. Complete the form: [MDH LTC COVID Booster Assistance Needed \(https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=3PNA39FLT8NDJRL8\)](https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=3PNA39FLT8NDJRL8).
- Will create and maintain a vaccination tracking system for both residents and staff to ensure booster doses are administered at the correct interval following the primary series of mRNA vaccines. Refer to the [COVID-19 Vaccine Dose Tracker for Long-term Care Facilities \(www.health.state.mn.us/diseases/coronavirus/hcp/lcdostrack.xlsx\)](http://www.health.state.mn.us/diseases/coronavirus/hcp/lcdostrack.xlsx).
- If assistance is needed with finding a local vaccine provider, requesting a vaccination team, accessing MIIC data, or other booster planning needs, please complete the form: [MDH LTC COVID Booster Assistance Needed \(https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=3PNA39FLT8NDJRL8\)](https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=3PNA39FLT8NDJRL8).
- Any facility with mobile residents may be asked by their vaccine provider to consider vaccination efforts to take place off-site. Discussion with the vaccine provider is vital to lay out expectations and capabilities of vaccination efforts.

The Minnesota Department of Health will collaborate with long-term care vaccinators and long-term care providers to assist with their booster vaccination gaps.

Minnesota COVID-19 registered vaccine providers will continue to use the current ordering process.

## Accessibility

- Both staff and residents who are due for a booster (meet the minimum interval and are in an eligible category) will be given the opportunity to be vaccinated during booster dose clinics.
- Unvaccinated staff and residents should be encouraged to start their primary vaccine series at planned booster dose events to maximize vaccine coverage and protection in facilities. *However, options for follow-up vaccinations (e.g., receiving of second and booster vaccination) must be discussed. Please do not assume your vaccine provider will be able to return for follow-up vaccinations.*

---

# Operational framework

## Part 1: Vaccination model selection

To ensure all long-term care providers have access to booster shots for their residents or staff, this plan outlines five operational models, which are outlined in more detail for long-term care providers in

[Vaccine Provider Models for COVID-19 Vaccination Efforts in Minnesota Long-term Care Facilities \(www.health.state.mn.us/diseases/coronavirus/hcp/lcvoxmodel.pdf\)](http://www.health.state.mn.us/diseases/coronavirus/hcp/lcvoxmodel.pdf).

All long-term care providers should self-identify the model that best meets their facility's vaccination needs. If facilities are multi-licensed, have multiple campuses, or consist of multiple types of facilities, please consider if you will adopt one model or have a combination of models, based on your circumstances.

### **Models 1-3**

These three models are ideal for the long-term care provider who is collaborating with their local or regional COVID-19 registered vaccine provider to coordinate all aspects of the vaccination process (e.g., vaccine storage and handling, vaccine transport, vaccine administration, MIIC reporting, etc.).

It is the responsibility of both the long-term care provider and the vaccine provider to discuss how the booster vaccination process will be operationalized, and to ensure clarity about roles, responsibilities, and timelines.

#### **Model 1: Full service on-site vaccination at the long-term care facility**

Under this model, the vaccine provider (e.g., pharmacy, health system, etc.) manages all core functions of the model to coordinate on-site clinics at long-term care facilities.

#### **Model 2: Full service off-site vaccination**

Primary vaccine provider (e.g., pharmacy, health system, etc.) manages all core functions of the model to coordinate regularly scheduled off-site clinics convened at their pharmacies, clinics, or community sites.

#### **Model 3: Hybrid on-site/off-site vaccination**

Primary vaccine provider (e.g., pharmacy, health systems, etc.) manages all core functions of Model 1 and 2 as described above to coordinate on-site vaccination clinics at the long-term care facilities and/or offer regularly scheduled off-site clinics convened at their pharmacies, clinics, or community sites.

#### **Model 4: Partial service on-site vaccination at long-term care facility**

Primary vaccine provider (e.g., pharmacy, health systems, etc.) manages vaccine inventory and transport to long-term care facilities, where facility nursing staff administer the vaccine. The primary vaccine provider is responsible for reporting to the [Minnesota Immunization Information Connection \(MIIC\) \(www.health.state.mn.us/people/immunize/miic/index.html\)](http://www.health.state.mn.us/people/immunize/miic/index.html) the doses administered. This model is best suited for the long-term care provider who has the capabilities of job sharing the vaccination responsibilities with their vaccine provider (e.g., vaccine provider stores and transports vaccine; long-term care provider administers vaccine; etc.).

### Model 5: Long-term care facility staff-led, on-site vaccination

Long-term care facility becomes the vaccine provider and manages all core functions of the COVID-19 vaccine program at their facility. The facility must have capacity, both staffing and equipment, to order, store, monitor, and document vaccine given. This includes entering doses-administered data into MIIC.

*Also, these vaccines come in multidose vials with no preservatives, so sites should be large enough to administer five to 10 doses within a six-hour period on most days that they open a vial. Some facilities may need to work with other sites in the community to get vaccine, as minimum orders are currently 100-140 doses for Moderna and Johnson & Johnson, and 1,170 doses for Pfizer.*

Additional information about registering a long-term care facility to be a provider is at [COVID-19 Vaccine Provider Registration \(www.health.state.mn.us/diseases/coronavirus/vaccine/vaxreg.html\)](https://www.health.state.mn.us/diseases/coronavirus/vaccine/vaxreg.html).

## Part 2: Communication with key partners

After selecting your preferred vaccination model, communication with key partners is critical.

Reminder: Long-term care vaccine providers will not be operating under the same set of expectations and processes as during our initial vaccination efforts in December 2020.

This booster phase will need to be planned differently (e.g., host a monthly event, identify a minimum number of batched people who are due for a booster prior to scheduling an event, etc.).

- **Models 1-4:** Communicate with vaccine provider, as appropriate. Confirm scheduling, resources needed, number of anticipated vaccinations, and number of on-site visits (if applicable); review your vaccination tracker, discuss partner expectations, etc.
- **Model 5:** Communicate with MDH to: ensure you have met the qualifications and have the necessary training and resources; coordinate ordering of vaccine; etc.
- Ensure resident, staff, and families are aware of your vaccination plan, scheduling of vaccinations, etc.
- If assistance from MDH is needed, please submit your request via [MDH LTC COVID Booster Assistance Needed \(https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=3PNA39FLT8NDJRL8\)](https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=3PNA39FLT8NDJRL8).
- Communicate with at least a couple of vaccine providers in the event your primary vaccinator becomes unavailable.

## Part 3: Scheduling boosters

To make the most of the limited time and resources of vaccine providers statewide, it is vital that long-term care facilities group as many people as possible who are due to receive their boosters during a single event, while also working to ensure that the booster process is efficient and timely. Most vaccine providers will not be able to make multiple trips back to facilities, in contrast to the initial rollout of COVID-19 vaccines.

Tips for effective scheduling:

- Complete your resident and staff vaccination tracker: [COVID-19 Vaccine Dose Tracker for Long-term Care Facilities \(www.health.state.mn.us/diseases/coronavirus/hcp/ltdosetrack.xlsx\)](http://www.health.state.mn.us/diseases/coronavirus/hcp/ltdosetrack.xlsx).  
Reminder: If you need assistance from MIIC, please reference the steps outlined in [Attachment 1: Long-term Care Facility \(LTCF\) – Using MIIC to query COVID-19 status](#).
- Sort the tracker based on eligible booster shots and group people accordingly (e.g., Was there a minimum that your vaccine provider asked for upon coming out to your facility?; Can you combine eligible people with their upcoming flu shot?; Can you combine scheduling with an outing event?; etc.).
- **For models 1-4:** Consult with your vaccine provider regarding their availability and preferences, based on your tracker analysis.
- Communicate with your residents and staff who are due when boosters are offered: 1) provide situational awareness; and 2) ensure people are still in need of your assistance in securing their booster shot.
- Consider options for co-vaccination efforts (e.g., schedule COVID-19 and flu vaccinations together).

---

## Partner roles and responsibilities

### MDH booster vaccination leaders

- Disseminate regular booster planning updates to: long-term care providers, long-term care vaccine providers, health care coalitions, long-term care associations, local public health departments, tribal public health departments, and additional key stakeholders assisting with the booster vaccination effort.
- Assist with addressing vaccination resource needs via [MDH LTC COVID Booster Assistance Needed \(https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=3PNA39FLT8NDJRL8\)](https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=3PNA39FLT8NDJRL8). This form should be completed if you seek:
  - Assistance with finding a local vaccine provider.
  - Requesting a State vaccination team.
  - Assistance getting started.
- Gather monthly booster vaccination status updates via:
  - Assisted living facilities: Update booster vaccination status via [LTC COVID-19 Vaccine Reporting \(https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=W9XCKCDALW\)](https://redcap-vac.web.health.state.mn.us/redcap/surveys/?s=W9XCKCDALW).
  - Skilled nursing facilities: To be determined – MDH is awaiting further information about whether information will be gathered via weekly submission to CDC’s National Healthcare Safety Network.

## Long-term care providers

### Through the end of September:

- Review and address Parts 1 and 2 of the Operational Framework of this plan. If you have residents or staff who are eligible for a Pfizer booster based on the eligibility criteria noted above, you can move ahead to schedule boosters for those people, or refer them to pharmacies or other community vaccination sites if that is an appropriate option for them.
- **For models 1-4:** It is vital to begin reaching out to the local or regional vaccine providers with whom you have worked on previous vaccination efforts, or who are available to provide vaccination support (refer to [Part 2: Communication with key partners](#) above). *If you do not currently have one, reach out to your local public health department and/or your regional health care preparedness coordinator to help navigate who would be your most ideal partner to pursue for vaccination assistance.*
- Gather your resident and staff vaccination information to best assess when people will reach their booster eligibility status, based on the date of their second dose. Reference the [COVID-19 Vaccine Dose Tracker for Long-term Care Facilities](#) ([www.health.state.mn.us/diseases/coronavirus/hcp/ltdosetrack.xlsx](http://www.health.state.mn.us/diseases/coronavirus/hcp/ltdosetrack.xlsx)).
- **For models 1-4:** Communicate with the vaccine provider about how they would like to address first dose vaccination requests. Outline how people will receive their second and booster shots in the future.

### October through December:

- Maintain an updated vaccination tracker sheet for your residents and staff: [COVID-19 Vaccine Dose Tracker for Long-term Care Facilities](#) ([www.health.state.mn.us/diseases/coronavirus/hcp/ltdosetrack.xlsx](http://www.health.state.mn.us/diseases/coronavirus/hcp/ltdosetrack.xlsx)).
- **For models 1-4:** Communicate any changes/updates to your tracker sheet to your vaccine provider to mitigate any scheduling or resource capacity concerns.
- Schedule booster clinics (on- or off-site) for eligible residents and staff.
- Continue to watch for updates from MDH on additional recommendations for booster doses for people who received Moderna or Johnson & Johnson as their primary vaccine series, and about cross-product boosters.

## Vaccine providers

### Through the end of September:

- Explore options for maximizing multiple vaccinations (e.g., providing both flu and COVID-19 shots at one time) to best leverage efforts on-site or off.
- Coordinate with long-term care providers on an ideal cadence of providing booster clinics based on their need and your available resources.

**October through December:**

- Communicate with long-term care providers about any scheduling conflicts.
- Schedule booster clinics (on-site or off).

**Health care coalitions**

Health Care Coalitions (HCC) may have access to local booster events or local resources that may serve as an option for long-term care providers. Refer to the map on [Regional Health Care Preparedness Coordinators \(RHPC\)](http://www.health.state.mn.us/communities/ep/coalitions/rhpc.html) ([www.health.state.mn.us/communities/ep/coalitions/rhpc.html](http://www.health.state.mn.us/communities/ep/coalitions/rhpc.html)) to locate your respective coalition leaders.

**Local public health**

Vaccination assistance from local public health partners will vary statewide. Services may range from sharing community event information to providing vaccination services. Local public health leaders highly recommend that long-term care partners reach out and explore vaccination options.

**Finance and cost**

All COVID-19 vaccines are free. However, vaccine providers may charge insurance companies an administration fee for giving the vaccine to people. It is the responsibility of the vaccinator to bill insurance companies for vaccine administration. For more information regarding billing insurance, please reference pages 23-24 of the [Interim COVID-19 Vaccine Provider Guide](http://www.health.state.mn.us/diseases/coronavirus/vaccine/guide.pdf) ([www.health.state.mn.us/diseases/coronavirus/vaccine/guide.pdf](http://www.health.state.mn.us/diseases/coronavirus/vaccine/guide.pdf)).

**Plan management**

Date	Changes Made	Staff responsible for changes

Minnesota Department of Health | [health.mn.gov](http://health.mn.gov) | 651-201-5000  
 625 Robert Street North PO Box 64975, St. Paul, MN 55164-0975

Contact [health.communications@state.mn.us](mailto:health.communications@state.mn.us) to request an alternate format.

# Attachment 1: Long Term Care Facility (LTCF) – Using MIIC to query COVID-19 status

Follow these steps to use the Minnesota Immunization Information Connection (MIIC) to request the COVID-19 vaccination status of your LTCF residents. **You must complete steps 1-3 to request your report.**

---

## 1. Make sure your facility is set up in MIIC.

Your facility must be set up in MIIC in order to look up immunization records and create lists. To get set up, refer to [Participating in MIIC](#) ([www.health.state.mn.us/people/immunize/miic/participate/index.html#enroll1](http://www.health.state.mn.us/people/immunize/miic/participate/index.html#enroll1)) complete a Data Use Agreement and submit your agreement. If you're not sure whether your organization is already set up in MIIC, contact the MIIC Help Desk at [health.miichelp@state.mn.us](mailto:health.miichelp@state.mn.us) for assistance.

---

## 2. Create/update a list of LTCF residents in MIIC.

To request the LTCF booster report, you will need to have a list of your current residents in MIIC. Facilities may make a new list in MIIC for each data request or may update and maintain one list over time.

### If creating a list:

- Follow the MIIC training resources to create a list in MIIC.
  - Video:
    - Visit [User Guidance and Training Resources](#) ([www.health.state.mn.us/people/immunize/miic/train/index.html#2](http://www.health.state.mn.us/people/immunize/miic/train/index.html#2)) and click on “Webinar #2: Exploring MIIC” in the MIIC webinar series section.
  - PDF User Guide:
    - Visit [Using Lists in MIIC User Guidance and Training Sources](#) ([www.health.state.mn.us/people/immunize/miic/train/uselists.html](http://www.health.state.mn.us/people/immunize/miic/train/uselists.html)) and click on “User Guide: Setting Up and Managing Lists (PDF).”
- Make sure that your list only contains current residents and does not contain any residents that have moved or are deceased.
- Name your list: COVID19Vaxstatus\_ORGCODE\_Date. Where ORGCODE is your organizations MIIC organization code. For example, “COVID19Vaxstatus\_ShadyShoresVilla\_9.10.21.” This will make it easier for MIIC staff to identify your list.

**If updating an existing list:**

- Visit our [Using Lists in MIIC User Guidance and Training Sources \(www.health.state.mn.us/people/immunize/miic/train/uselists.html\)](https://www.health.state.mn.us/people/immunize/miic/train/uselists.html) and click on “User Guide: Setting Up and Managing Lists (PDF).”
- Remove any residents that have left your facility from your list in MIIC.
- Add any residents that have since moved into your facility to your list in MIIC.

**Note:** This process is to verify the vaccination status of **residents only**. If you are interested in verifying the vaccination status of your employees, send an email to [health.employervaccrequest@state.mn.us](mailto:health.employervaccrequest@state.mn.us).

---

## 3. Request your report.

Send an email to [health.miichelp@state.mn.us](mailto:health.miichelp@state.mn.us) to request your LTCF COVID-19 Vaccination Status Report.

To ensure that you receive the data requested, include the following information in your email:

- **Subject line:** LTCF COVID-19 Vax Status Report Request
- **Email body:**
  - Name of the organization
  - Organization Code you use to log in to MIIC
  - Name of MIIC list
  - Date you created/last updated the list
  - Contact name & email to send report to

Failure to provide the listed information in your email, may result in delays in obtaining your report. Please note that data requests may take three to five business days to process.

---

## 4. Receiving your report.

Once your report has been processed, you will receive an encrypted email containing a list of your residents and their COVID-19 vaccinations.

## 5. Interpreting your report.

Your report will be sent as an Excel spreadsheet. Here is a list of the columns and what each one means:

Column	Description
Client ID	This is the resident's client ID in MIIC.
Last name	Resident's last name
First Name	Resident's first name
Date of birth	Resident's date of birth
Date first dose	Date of their first COVID-19 dose
Product first dose	What vaccine product the resident received for their first COVID-19 dose
Date second dose	Date of their second COVID-19 dose
Product second dose	What vaccine product the resident received for their second COVID-19 dose
Date third dose	Date of their third COVID-19 dose
Product third dose	What vaccine product the resident received for their third COVID-19 dose
Date fourth dose	Date of their fourth COVID-19 dose
Product fourth dose	What vaccine product the resident received for their fourth COVID-19 dose
Date fifth dose	Date of their fifth COVID-19 dose
Product fifth dose	What vaccine product the resident received for their fifth COVID-19 dose
Recommended next COVID	The date the resident is recommended to get their next COVID-19 dose

The report will include all of the COVID-19 doses on each resident's MIIC record. If there are any missing dates, the resident does not have that dose on their record (i.e., if a resident only has a date and product type listed for date first dose, they only have one COVID-19 dose in MIIC).

## Attachment 2: Pharmacy Contacts

The following pharmacies are providing COVID-19 booster doses in long-term care (LTC) settings for eligible residents and staff. They have indicated they have capacity to provide booster doses to additional LTC facilities that need a vaccinator. Please reach out using the preferred contact information provided in the table if your LTC needs a vaccinator.

Pharmacies that can provide booster doses to LTCs needing a vaccinator	Minnesota regions of the state they could serve	Preferred contact information for LTCs in need of a vaccinator to use
