

## COVID-19 VACCINE

A vaccine is designed to prevent diseases. COVID-19 vaccines tell your body how to recognize and fight the COVID-19 virus. The

COVID-19 vaccines cannot give you COVID-19. The COVID-19 vaccines are very good at protecting you from COVID-19 disease. If you do get sick with COVID-19 after being vaccinated, it is less likely that you will get very sick or have to go to the hospital.

The COVID-19 vaccines were carefully tested before being authorized for emergency use. Tens of thousands of Black, Latinx, American Indian, and Asian people participated in the Pfizer, Moderna, and Johnson & Johnson vaccine studies. We know that these communities, along with our disability and LGBTQ+ communities, are often excluded from the benefits of medicine but experience ongoing and historical racism, medical trauma, and abuse. These factors worsen the impact of COVID-19 for these communities and emphasize the importance that the vaccine works and is safe for all.

# BASICS

## The COVID-19 vaccine is safe, and it works.

### Why should you get the COVID-19 vaccine?

- **Protect yourself** from COVID-19.
- **Support your community.** Help keep businesses, schools, and other places open.
- **The vaccine is FREE** for everyone. Insurance and immigration status does not matter.
- **Help put an end to the pandemic.**

### What to expect when you get the vaccine

- People trained to give the vaccine will walk you through the process. 
- For some COVID-19 vaccines, you need to get two doses to be protected. The person who gives you the vaccine will tell you if you need a second dose and when to get it. Both doses must be the same kind of vaccine. If you get the Johnson & Johnson vaccine, you only need one dose. 
- You will be monitored after you get the vaccine for any serious side effects. 
- You will receive a vaccine card when you get your vaccine. This will have which kind of vaccine you received. If you need a second dose, an appointment can be written on the vaccine card. 
- It is your choice to get the vaccine. 

### THE VACCINE DOES NOT HAVE:

- Preservatives
- Pork products or gelatin
- Egg
- COVID-19 live virus

## Who can get the vaccine?

Everyone 16 years and older is recommended to get the COVID-19 vaccine when it is available to them. This includes people with medical conditions, who have had COVID-19, and those of different ages, races, and ethnicities. The vaccine is safe for people who are pregnant and those with weak immune systems, but they should talk to their doctor before getting the COVID-19 vaccine.

Minnesota has a plan to give the first, limited doses of vaccine to those who are at highest risk to get COVID-19 and/or to get very sick from COVID-19.

We will provide updates through many news channels for who can get vaccinated, when they can get vaccinated, and where they can get vaccinated.

## SIDE EFFECTS

Some people have side effects after getting the vaccine. Side effects usually last one or two days and usually do not prevent you from daily activities. You may have:

-  • SORE ARM
-  • MUSCLE ACHES
-  • TIREDNESS
-  • HEADACHE
-  • FEVER/CHILLS

If you have serious side effects, go to a hospital or call 911.

## Keep yourself and others safe

It will take a long time for everyone to get vaccinated. Even after getting the COVID-19 vaccine, you should continue taking basic prevention steps when recommended:

**Wear a mask.**

**Wash your hands.**

**Stay 6 feet from others.**

**Stay home if you are sick.**
