

# Weekly Influenza & Respiratory Illness Activity Report

A summary of influenza surveillance indicators prepared by the Division of Infectious Disease Epidemiology Prevention & Control

**Week Ending November 30, 2019 | WEEK 48**

All data are preliminary and may change as more information is received

## Minnesota Influenza Geographic Spread

No Activity

Sporadic

Local

Regional

Widespread

During the week ending November 30, 2019 (Week 48), surveillance indicators showed regional geographic spread of influenza *(based on CDC's Activity Estimates Definitions)*.

Since the start of the influenza season, no pediatric influenza-related deaths have been reported.

# Hospitalized Influenza Surveillance

Hospitalized influenza cases are based on disease reports of laboratory-positive influenza (via DFA, IFA, viral culture, EIA, rapid test, paired serological tests or RT-PCR) and specimens from hospitalized patients with acute respiratory illness submitted to MDH-PHL by hospitals and laboratories. **Due to the need to confirm reports and reporting delays, consider current week data preliminary.**

## Hospitalized Influenza Cases by Type Minnesota (FluSurv-NET\*)

Hospitalizations this week	Hospitalizations last week	Total hospitalizations (to date)
41	28	138

## Hospitalized Influenza Cases by Season, Minnesota (FluSurv-NET\*)

Season	Total hospitalizations (historic)
2014-2015	4,081
2015-2016	1,538
2016-2017	3,695
2017-2018	6,446
2018-2019	2,543
<b>2019-2020</b>	<b>138 (to date)</b>

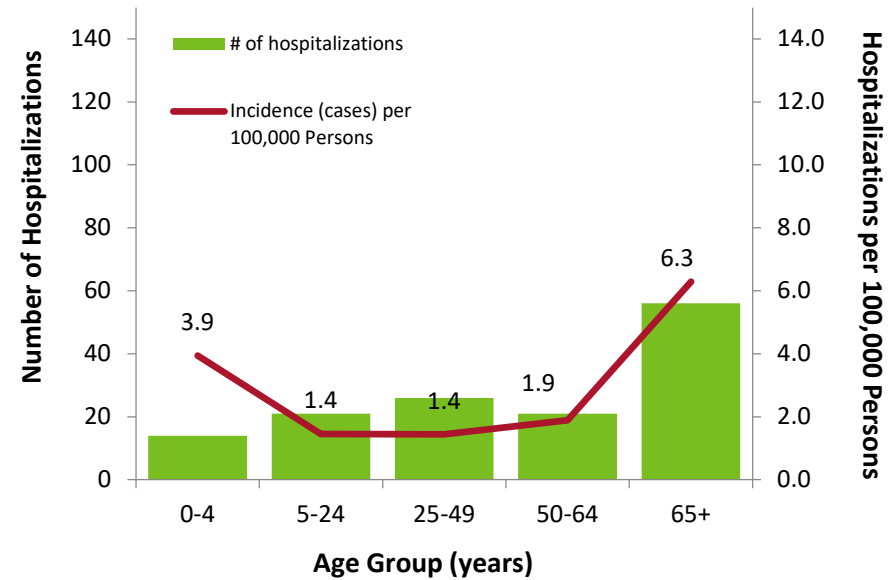

\*Influenza Surveillance Network

# Hospitalized Influenza Surveillance (continued)

## Number of Influenza Hospitalizations and Incidence by Region, Minnesota September 29, 2019 – November 30, 2019

## Number of Influenza Hospitalizations and Incidence by Age, Minnesota September 29, 2019 – November 30, 2019

Region	Hospitalizations this week	Total (to date)
Central	2 (5%)	16 (12%)
Metro	34 (83%)	104 (75%)
Northeast	1 (2%)	1 (1%)
Northwest	1 (2%)	1 (1%)
South Central	1 (2%)	4 (3%)
Southeast	0 (0%)	8 (6%)
Southwest	1 (2%)	2 (1%)
West Central	1 (2%)	2 (1%)

Median age (years) at time of admission
58.0

# Influenza-Associated Death Surveillance

Influenza deaths are collected via reports from Minnesota's death certificate database, hospitals, and long-term care facilities. Decedents with influenza listed as a cause of or contributor to death, have recent laboratory confirmation of influenza, or are part of an ongoing influenza outbreak at a long-term care facility are reported to influenza surveillance. **Due to the need to confirm reports and reporting delays, consider current week data preliminary.**

## Deaths Associated with Influenza by Season, Minnesota

## Deaths Associated with Influenza by Age Group and Season, Minnesota

Season	Total deaths (historic)	Total pediatric (<18 years) deaths (historic)
2014-2015	368	10
2015-2016	76	3
2016-2017	273	2
2017-2018	440	6
2018-2019	95	1
<b>2019-2020</b>	<b>3 (to date)</b>	<b>0 (to date)</b>

Season	Median age (years) at time of death
2014-2015	85
2015-2016	68
2016-2017	86
2017-2018	85
2018-2019	75
<b>2019-2020</b>	<b>91 (to date)</b>

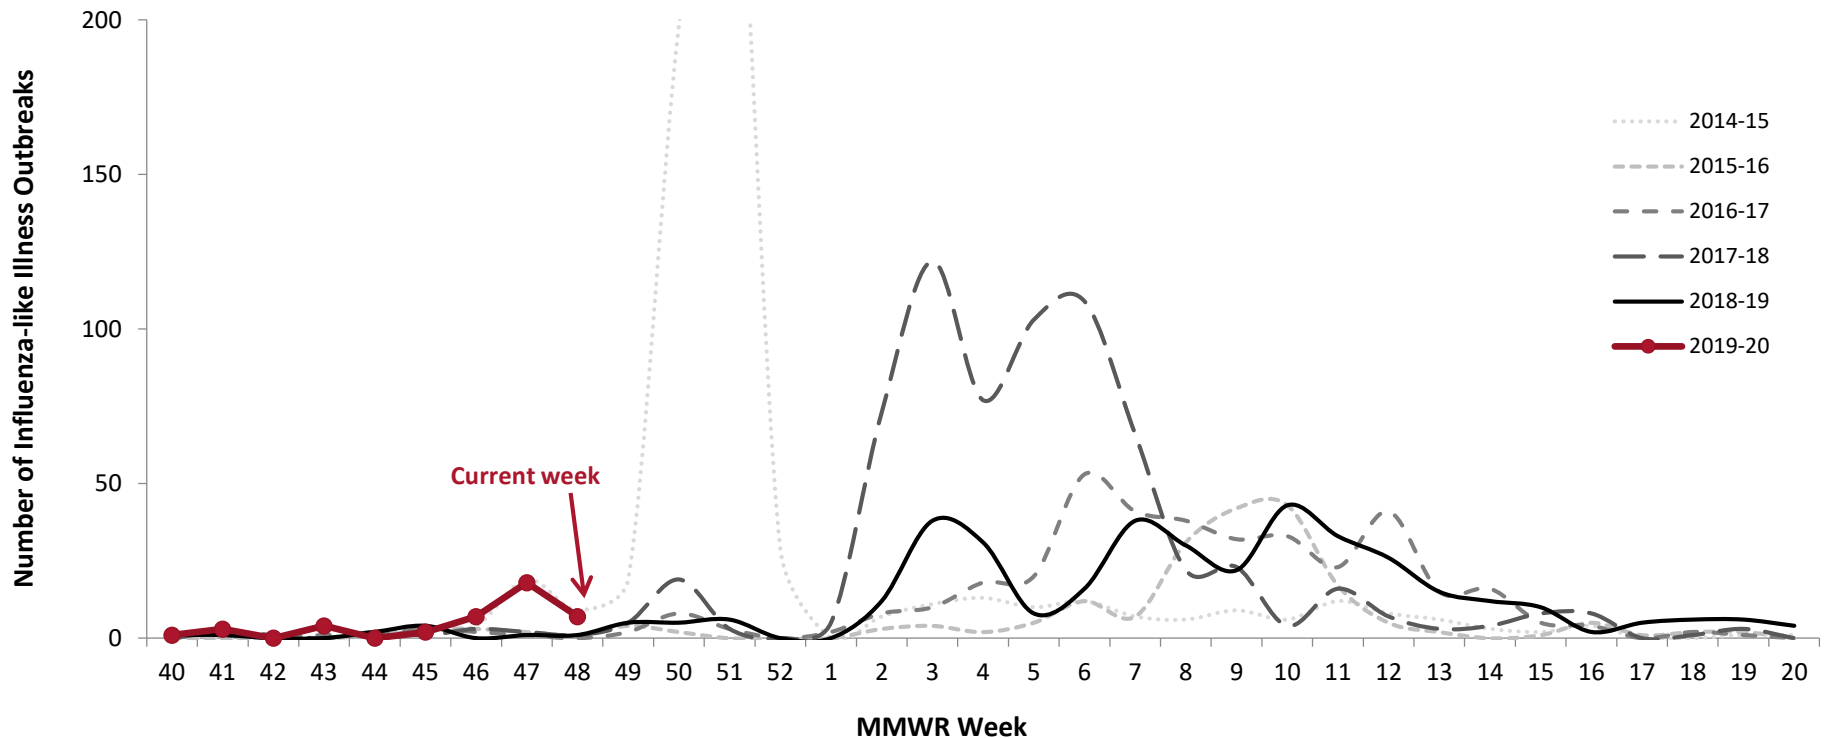

\*Influenza Surveillance Network

# Respiratory Disease Outbreak Surveillance

## School Outbreaks

K-12 schools report an outbreak of influenza-like illness (ILI) when the number of students absent with ILI reaches 5% of total enrollment or three or more students with ILI are absent from the same elementary classroom.

### Influenza-like Illness (ILI) in Schools by Season

New school outbreaks this week	New school outbreaks last week	Total this season (to date)
7	18	42

## Long-Term Care (LTC) Outbreaks

LTC facilities report to MDH when they suspect an outbreak of influenza in their facility. Laboratory-confirmed outbreaks are reported here.

### Confirmed Influenza Outbreaks in LTC by Season

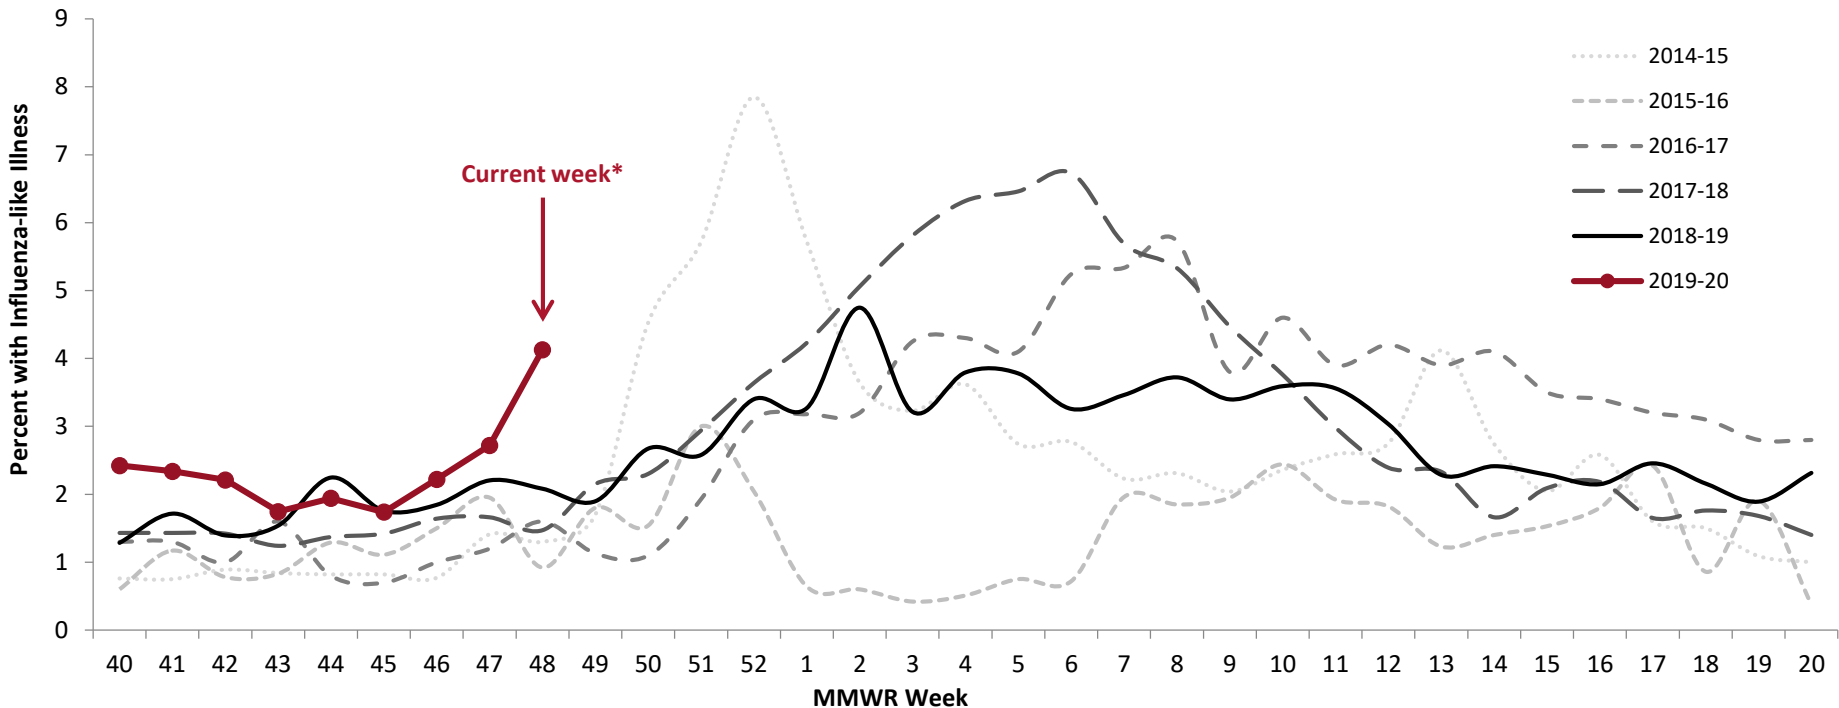

New LTC outbreaks this week	New LTC outbreaks last week	Total this season (to date)
1	1	4

# Sentinel Provider Surveillance (Outpatients)

MDH collaborates with healthcare providers who report the total number of patients seen and the total number of those patients presenting to outpatient clinics with influenza-like illness.

## Percentage of Persons Presenting to Outpatient Clinics with Influenza-Like Illness (ILI)

% of outpatients with ILI this week	% of outpatients with ILI last week
4.1%	2.7%

\* Indicates current week-data may be delayed by 1 or more weeks

# Laboratory Surveillance

The MN Lab System (MLS) Laboratory Influenza Surveillance Program is made up of more than 310 clinic- and hospital-based laboratories, voluntarily submitting testing data weekly. These laboratories perform rapid testing for influenza and Respiratory Syncytial Virus (RSV). Significantly fewer labs perform PCR testing for influenza and three also perform PCR testing for other respiratory viruses. MDH-PHL provides further characterization of submitted influenza isolates to determine the hemagglutinin serotype to indicate vaccine coverage. Tracking the laboratory results assists healthcare providers with patient diagnosis of influenza-like illness and provides an indicator of the progression of the influenza season as well as prevalence of disease in the community.

## Specimens Positive for Influenza by Molecular Testing\*, by Week

% molecular tests positive this week

9.92%

% molecular tests positive last week

8.59%

\* Beginning in 2016-17, laboratories report results for rapid molecular influenza tests in addition to RT-PCR results

# Laboratory Surveillance (continued)

## MLS Laboratories – Influenza Testing

### Specimens Positive by Influenza Rapid Antigen Test, by Week

## MLS Laboratories – RSV Testing

### Specimens Positive by RSV Rapid Antigen Test, by Week

Region	% rapid antigen influenza tests + (current week)
Northeast	5%
South Central	0%
Southwest	2%
Southeast	14%
Metro	17%
Central	10%
West Central	11%
Northwest	0%
State (overall)	13%

Region	% rapid antigen RSV tests + (current week)
Northeast	12%
South Central	0%
Southwest	75%
Southeast	27%
Metro	23%
Central	29%
West Central	0%
Northwest	0%
State (overall)	13%

# Hospitalized RSV Surveillance

Surveillance for respiratory syncytial virus (RSV) began in September 2016. Hospitalized inpatients of all ages who reside in the 7-county Twin Cities metropolitan area (Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington) with laboratory-confirmed RSV are reportable. **Due to the need to confirm reports and reporting delays, consider current week data preliminary.**

## Hospitalized RSV Cases by Subtype, Minnesota

## Number of RSV Hospitalizations and Incidence by Age, Minnesota

Hospitalizations this week

37

Hospitalizations last week

8

Total hospitalizations

129

Median age at time of admission

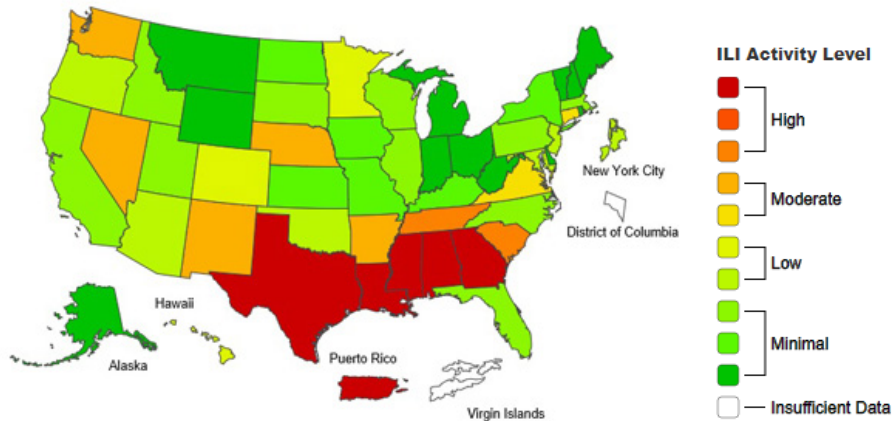

7.5 months

# Weekly U.S. Influenza Surveillance Report

2019-2020 Influenza Season Week 47, ending November 23, 2019

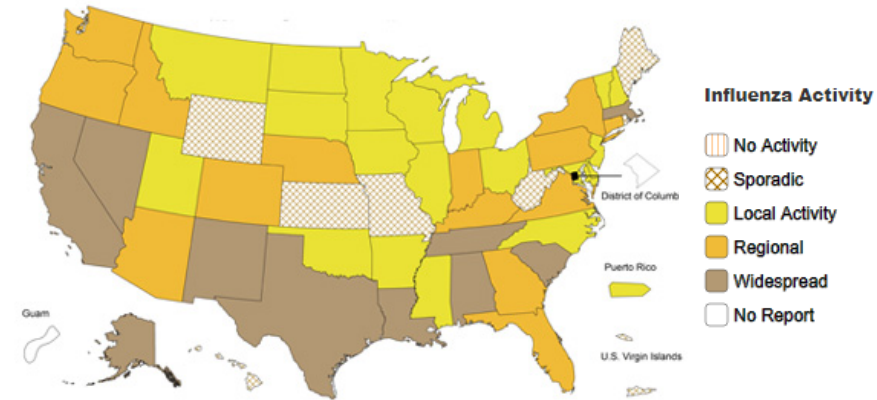

According to this week's FluView report, seasonal influenza activity in the United States continues to increase but the amount of activity and the predominant influenza virus varies by region.

## Influenza-Like Illness (ILI) Activity: Outpatient Illness

The number of jurisdictions experiencing high ILI activity remained at 8 this week. In addition, 7 jurisdictions had moderate activity compared to 0 last week.

## Geographic Spread of Influenza

The number of jurisdictions reporting regional or widespread activity increased from 15 last week to 24 this week.

## Key Messages from CDC

- Nationally, ILI activity has been at or above baseline for three weeks; however, the amount of influenza activity across the country varies with the south and parts of the west seeing elevated activity while other parts of the country are still seeing low activity.
- There is significant cocirculation of influenza B/Victoria, A(H1N1)pdm09, and A(H3N2) viruses with the predominant virus varying by region and age group.
- The flu season is just getting started. It's not too late to get vaccinated. Flu vaccination is always the best way to prevent flu and its potentially serious complications.
