Percentages of people with HIV engaged in selected stages of the care continuum, Minnesota, 2018

a Defined as persons undiagnosed (estimate 960 (500-1,400), 95% CI) and persons diagnosed (n=8702) aged 13 or more with HIV infection (regardless of stage at diagnosis) through year-end 2017, who were alive at year-end 2018.

b Defined as persons diagnosed aged 13 or more with HIV infection (regardless of stage at diagnosis) through year-end 2017, who were alive at year-end 2018.

c Calculated as the percentage of persons linked to care within 30 and 90 days after initial HIV diagnosis during 2017. Linkage to care is based on the number of persons diagnosed during 2017 and is therefore shown in a different color than the other bars with a different denominator.

d Calculated as the percentage of persons who had ≥1 CD4 or viral load test results during 2018 among those diagnosed with HIV through year-end 2017 and alive at year end 2018.

e Calculated as the percentage of persons who had suppressed viral load (≤200 copies/mL) at most recent test during 2018, among those diagnosed with HIV through year-end 2017 and alive at year end 2018.

†Calculated as number of persons who had suppressed VL (≤200 copies/mL) at most recent test during 2018, among those who were retained in care during 2018 (5,530/6,244).
