²Total number of children with biologically plausible weight and height measurements

³Includes children from US and foreign born

⁴Total children ages 2 to 5 years with weight status information.

Analyses based on one randomly selected record per child. Excludes records with unknown data or errors.

Biologically implausible values (BIV) for weight, height and BMI at a z score +5 removed, which is consistent with previous MN WIC reports for years 2011 to 2016.

For 2017, BIV was defined for weight z score <-5 and >8; height z score <-5 and >4; BMI z score <-4 and >8.

<https://www.cdc.gov/nccdphp/dnpao/growthcharts/resources/sas.htm> These methodologies excluded <1% of all records.

⁵Total number in weight category (Percentage of total children).

Based on 2000 CDC growth chart percentiles for children 2 years of age and older; underweight is defined as

BMI-for-age < 5th percentile, overweight is defined as BMI-for-age \geq 85th to < 95th percentile,

obese is defined as \geq 95th percentile to < 97.5 percentile, and very obese is defined as \geq 97.5 percentile.
