Minnesota Department of Health Project Firstline Cough Education Bundle

Coughing by itself can be caused by a lot of things, but a cough in combination with congestion—a stuffy nose, runny nose, watery eyes, and/or a nasally voice—is commonly caused by viruses. Viruses like respiratory syncytial virus (RSV) or influenza can spread easily when an infected person talks, breathes, coughs, or otherwise blows air out of their nose or mouth. One person releasing these germs into the air can infect multiple people quickly.
